PROFESSIONAL SUMMARY

Frontend Developer with 4 years of experience building scalable web applications and enterprise systems using **ReactJS, TypeScript, and modern frontend architecture**. Specialized in developing **data-heavy dashboards, ERP systems, and workflow-driven interfaces**.

Strong expertise in **performance optimization, large dataset rendering, state management architecture, and component design**. Experienced in translating complex business workflows into maintainable UI systems while ensuring performance, scalability, and user experience.

TECHNICAL SKILLS

Programming languages: JavaScript (ES6+), TypeScript

Frontend Frameworks: React, Next

State Management: React Query, Zustand, Redux

UI & Styling: Tailwind CSS, Ant Design, Responsive Design, Flexbox, CSS Grid

Performance: Code Splitting, Lazy Loading, Memoization, Hybrid Rendering, Core Web Vitals

API & Realtime: RESTful APIs, Axios, WebSocket, Socket.IO, Error Handling, Retry Logic

Testing: Jest (Unit Testing, Async Testing - Basic)

Tools: Vite, npm

Authentication: JWT, Access Token, Refresh Token

Process: Agile, Scrum, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

Frontend Developer

Oct 2024 – Now

Nam Viet Packaging

Project: Nam Viet ERP – Team size: 5

Product: Production-level ERP system built to digitize and centralize the manufacturing workflow of Nam Viet Packaging.

Technologies: ReactJS, Redux, React Query, PHP, TailwindCSS, Ant Design, Vite, Docker, Jest

Responsibilities:

- Developed multiple ERP modules including Production, Quality Control, Inventory, Accounting, Reporting, and Dashboard, supporting complex factory workflows.
- Built reusable UI components (tables, forms, modals) used across 6+ modules
- Implemented state management using Redux (global state) and React Query (server state)
- Integrated REST APIs and handled asynchronous data flows
- Optimized rendering performance for data-heavy UI using memoization and lazy loading
- Analyzed performance using Chrome DevTools and Lighthouse
- Collaborated with backend and design teams in Agile environment

Achievements:

- Reduced unnecessary re-renders, improving UI responsiveness by ~25–35% on large tables (1,000–10,000+ rows)
- Reduced API calls by ~30–40% using caching strategies (React Query)

- Improved initial load time of key modules by ~20% via code splitting and lazy loading
- Decreased UI-related production bugs by improving state consistency and component reuse

Frontend Developer
Designveloper Company (DSV)
Project: HRM System – Team size: 10

Apr 2022 - May 2024

Product: Production HRM platform designed for internal resource management, supporting employee lifecycle, project tracking, and operational workflow coordination.

Technologies: Svelte, TypeScript, TailwindCSS

Responsibilities:

- Developed and maintained multiple HRM modules including Users, Project Management, Timesheet, Timelog, Clients, OKRs, Employees, and Calendar, supporting internal workforce and project operations.
- Built dashboards with filtering, conditional rendering, and dynamic data updates
- Improved component structure to enhance maintainability and reduce re-renders
- Implemented UI for workflow-driven features (timesheet, resource management)
- Participated in Agile/Scrum processes (sprint planning, collaboration)
- Debugged and resolved production UI issues

Achievements:

- Reduced unnecessary re-renders in complex dashboards, improving UI responsiveness
- Improved code maintainability by reducing duplicated logic across modules
- Supported stable system usage for ~50–100+ internal users across multiple modules

Project: Cattr (Time Tracking System) – Team size: 5

Product: Internal time-tracking module integrated into the company’s HRM platform, designed to replace third-party tracking tools and centralize employee working hour management.

Technologies: ReactJS, TypeScript, Bootstrap

Responsibilities:

- Developed internal time tracking system to replace third-party tools
- Implemented time logging, validation, and editing features
- Integrated APIs for data synchronization

Achievements:

- Reduced dependency on third-party tools, improving internal system control
- Improved data accuracy for time tracking through validation logic
- Supported daily usage for internal teams with consistent data synchronization

Web Development Lecturer
Teky Academy

Apr 2021 - Apr 2022

EDUCATION

- **Master of Computer Science – In Progress**
Ho Chi Minh City University of Education (HCMUE) 2025 – *Present*
- **Bachelor of Computer Science (Teacher Education) – Graduated**
Ho Chi Minh City University of Education (HCMUE)

LANGUAGES

- ENGLISH – TOEIC 700
